ASPECT PRINTING

Set up your foil artwork

Your printed design and foil areas go in one PDF, in this order.

Printing on one side: two PDF pages

1. Printed front

2. Front foil area

Printing on both sides: four PDF pages

1. Printed
front

2. Printed
back

3. Front
foil area

4. Back
foil area

Foil is included on one face only.

For a four-page file, put the foil artwork on page 3 OR page 4.

Keep the unused foil page blank. Do not remove it from the PDF.

For your designer

Set the design to the finished card size and add 3mm bleed on every edge.

Use CMYK for the printed pages. Embed or outline fonts.

Use solid vector shapes for foil, in a spot swatch named Gold or Silver.

Keep foil at least 2mm from every cut edge, including rounded corners.

Keep important printed text inside the 3mm safe line. Do not scale templates.

Remove all guide lines and text from every page before exporting.

Not sure how to make a foil layer?

If you use Canva or your software cannot create a named spot colour,

ask us before ordering. We can advise on the artwork setup you need.
