ASPECT PRINTING

Set up raised-gloss artwork

Put the printed design and gloss masks in one PDF for each design.

Printing on one side: two PDF pages

1. Printed front

2. Front gloss mask

Printing on both sides: four PDF pages

1. Printed
front

2. Printed
back

3. Front
gloss mask

4. Back
gloss mask

Coating on one face or both faces

For one coated face, leave the unused gloss-mask page blank.

For coating on both faces, use both mask pages in the four-page PDF.

For more than one design, send one complete PDF for each design.

For your designer

Set the design to the finished card size and add 3mm bleed on every edge.

Use CMYK for the printed pages. Embed or outline fonts.

Use a spot swatch named Scodix for the raised-gloss artwork.

Keep gloss at least 2mm from every cut edge, including rounded corners.

Keep important printed text inside the 3mm safe line. Do not scale templates.

Remove all guide lines and text from every page before exporting.

Need help preparing a gloss layer?

If you use Canva or your software cannot create a named spot colour,

ask us before ordering. We can advise on the artwork setup you need.
